LETTER OF TRANSMITTAL.

U. S. DEPARTMENT OF AGRICULTURE,
DIVISION OF PUBLICATIONS,
Washington, D. C., July 6, 1900.

SIR: I have the honor to transmit herewith the manuscript of an Index to Literature Relating to Animal Industry in the Publications of the Department of Agriculture, 1837 to 1898, prepared by George F. Thompson, Editorial Clerk, Bureau of Animal Industry, and to recommend the publication of the same as Bulletin No. 5 of this Division. This index renders available for reference and use a large amount of very valuable matter now so scattered in various bulletins and reports as to be almost worthless. Three indexes of a similar character have already been published by this Division, which has undertaken to continue such work as far as its other duties will permit. Moreover, at the time this index was undertaken Mr. Thompson was in charge of the document section of this Division, and since his transfer to the Bureau of Animal Industry he has continued the work in addition to his other labors and mostly in his own time. Considering the magnitude of the undertaking, the work has been completed in a short time, and will, it is believed, be valuable to all who are interested in the animal industry of the country.

Respectfully,

GEO. WM. HILL, *Editor.*

Hon. JAMES WILSON, *Secretary.*

PREFACE.

The scope of this index includes all of the literature relating to animal industry that has appeared in the publications of the Department of Agriculture since its inception in 1837. When the work was undertaken, about three years ago, the plan was to make a consolidated topical index of the documents issued by the Bureau of Animal Industry only, but a survey of the Department publications as a whole made it apparent that the index, in order to include all the literature and thereby to serve the best purpose, must be expanded to the scope of its present completed state, even at the expenditure of very much more time and labor. The wisdom of this action will be seen when it is remembered that a large number of reports on investigations of animal diseases was published before the Bureau of Animal Industry was organized, and that practically all of the statistics relating to animal industry have heretofore appeared in the reports of the Division of Statistics and in the Annual Reports of the Department.

The only series of publications excepted in the preparation of this work are Insect Life (no longer issued) and the Experiment Station Record. A consolidated index of the former, covering the seven volumes issued, has been printed, and a full topical index accompanies each volume of the latter. With these exceptions, an earnest effort has been made to have this work complete, and it is believed that nothing of importance has been omitted. The plan, however, has been to insert every topic relating to the subject without reference to its importance at this time.

It can hardly be expected that a work of such magnitude as this, having been prepared during the odd moments and hours spared from routine or regular work, can be free from inconsistencies and imperfections, and no one can be more conscious of their presence in this volume than the author. It is believed, however, that these matters will not impair its usefulness, and the work is handed over for publication in the hope that it will prove valuable to some extent at least in the hands of those who have to deal with the literature of the animal industry of the country, whether they are employed in the Department of Agriculture or elsewhere.

Previous to 1862 the agricultural reports were published as Part II of the Patent Office Reports, but in this work, as in previous indexes of the Department, they are all regarded as agricultural reports. A key to the abbreviations used and a list of the documents indexed are given.

It is proper and a pleasure to acknowledge in this connection the assistance rendered by Mr. Charles H. Greathouse, M. A., of the Division of Publications, who prepared a large number of the entries.

GEORGE FAYETTE THOMPSON.
